OrbisMoneta

VERSION

Draft 1

STATUS

Awaiting your comments

A Word version of this document is supplied alongside it. If you would rather type your changes directly over ours, use that one — whichever is easier for you.

START HERE

How to read this

The document follows the website from top to bottom. Each page of the site becomes a section here.

- 1

Read it as a whole

The copy appears in the order a visitor will meet it. Small grey labels above each piece of text — Headline, Body copy, Button — simply tell you where it sits on screen.
- 2

Change anything you like

Mark up this PDF, or type straight over the text in the Word version. Anything you leave alone, we will build exactly as written here.
- 3

Answer the yellow boxes first

Boxes headed **“We need this from you”** are the pieces still missing — photographs, profiles, articles. These are what hold up the build, so they matter most.

HEADLINE

The Future of Money Is Being Built Today

OPENING STATEMENT

Money is becoming digital. Payments are becoming instant. Assets are becoming tokenized. Artificial intelligence is reshaping financial services.

BODY PARAGRAPH 1

As digital currencies, tokenized assets, real-time payments, and AI converge, financial institutions are reimagining how value is created, transferred, and settled across an increasingly connected global economy.

BODY PARAGRAPH 2

This transformation demands secure, interoperable, and future-ready financial infrastructure.

CLOSING STATEMENT

OrbisMoneta helps banks, central banks, payment providers, fintechs, and enterprises navigate this transformation by designing and delivering the next generation of financial infrastructure.

Why OrbisMoneta

HEADLINE

Where product engineering meets financial expertise.

INTRODUCTION

OrbisMoneta was built to bridge the gap that most institutions face — between the ambition to modernize and the specialist capability to execute. We combine deep financial domain knowledge, engineering discipline and product-building experience into a single, accountable engagement model.

Product & Engineering, Not Just Advisory

We build and ship — proprietary software, custom engineering solutions and hosted platforms — not just strategies and roadmaps.

Full Spectrum of Financial Technology

Enterprise payments, digital money, AI, fraud risk, open finance and cloud-native platforms — deep expertise across the entire modern financial stack.

From Boardroom to Production

We carry engagements from strategy and architecture through to live deployment — with a single team accountable for the outcome.

Regulator & Institution Grade

Everything we design and build meets the compliance, governance and explainability standards that central banks, regulators and supervisory bodies require.

Highlight cards

Three cards on the right of the "Why" section.

Delivery Model

Software + Engineering + Advisory — Three capabilities, one integrated team — eliminating the gaps between strategy, build and operations that derail most modernization programmes.

Coverage

Payments · Digital Money · AI · Risk — The four forces reshaping financial services infrastructure — available under one roof, delivered by practitioners who have built in each domain.

Principle

Independent. Accountable. Outcome-Led. — No platform allegiances, no vendor quotas. Every recommendation and every line of code is measured against client outcomes, not commercial incentives.

Strategic Advisory & Engineering Services

The services offer: positioning statement, six service lines with focus areas, delivery approach and a closing call to action.

Section introduction

Our Services

Six service cards. Each has a title, a one-line promise and four focus areas.

Payment Modernization

Helping financial institutions modernize payment infrastructure for real-time, interoperable, and cloud-ready operations.

FOCUS AREAS

- Enterprise Payment Platforms
- ISO 20022 Modernization
- Instant & Digital Payments
- Payment Architecture

Payment Systems & Financial Market Infrastructure

Supporting the evolution of national payment systems and high-value payment infrastructure.

FOCUS AREAS

- RTGS Modernization
- Financial Market Infrastructure
- Settlement Architecture
- Payment System Transformation

Cross-Border Payments

Enabling modern cross-border payment ecosystems through interoperable and future-ready architectures.

FOCUS AREAS

- Cross-Border Modernization
- Digital Settlement
- Payment Bridges
- Multi-Currency Infrastructure

Digital Money & CBDCs

Helping organizations prepare for the next generation of digital money and programmable finance.

FOCUS AREAS

- CBDCs
- Stablecoins
- Digital Money Platforms
- Tokenized Finance

AI for Financial Services

Applying AI to improve operational efficiency, customer experience, and product innovation across financial services.

FOCUS AREAS

- AI Strategy
- Intelligent Operations
- Financial AI Solutions
- Product Innovation

Cloud-Native Platform Engineering

Designing scalable, secure, and API-first financial platforms for modern enterprises.

FOCUS AREAS

- Cloud-Native Architecture
- Platform Engineering
- API Banking
- Enterprise Integration

Product introduction

LABEL ABOVE THE HEADING

Products & Platforms

PRODUCT NAME

Digital Currency Hub™

PRODUCT DESCRIPTOR

Retail CBDC Platform for Commercial Banks

INTRODUCTION 1

The OrbisMoneta Digital Currency Hub enables commercial banks to rapidly launch and manage Retail CBDC services through seamless integration with a Central Bank's CBDC infrastructure.

INTRODUCTION 2

Designed for the evolving digital economy, the platform provides the foundation for delivering secure, compliant, and scalable digital currency services to retail customers, businesses, merchants, and government agencies.

Why Digital Currency Hub?

BODY PARAGRAPH 1

As Central Banks introduce Retail CBDCs, commercial banks need more than connectivity—they need an enterprise platform to manage customer onboarding, wallets, payments, compliance, and digital currency operations.

BODY PARAGRAPH 2

The Digital Currency Hub helps banks accelerate CBDC adoption while leveraging their existing banking and payment infrastructure.

Platform diagram

KEY CAPABILITIES

- Retail CBDC Banking
- Customer & Merchant Wallets
- Government Payment Programs
- Merchant & Corporate Collections
- Digital Currency Payments & Transfers
- API-Driven Integration
- Compliance & Operational Controls
- Enterprise Security & Scalability

DESIGNED FOR

- Commercial Banks
- Digital Banks
- Licensed Payment Institutions

BUSINESS BENEFITS

- Accelerate Retail CBDC readiness
- Reduce implementation complexity
- Integrate with existing banking systems
- Deliver seamless digital currency experiences
- Support future digital money initiatives

Deployment Options

LEAD LINE

Flexible Deployment to Match Your Strategy

BODY COPY

The OrbisMoneta Digital Currency Hub is available through flexible deployment models to meet the technology, security, and operational requirements of commercial banks.

License Edition

Deploy the platform within your own infrastructure or preferred cloud environment, with full operational control and enterprise integration.

Hosted Platform (Platform as a Service)

Accelerate your Retail CBDC journey with a fully managed, cloud-hosted deployment operated by OrbisMoneta, enabling faster implementation while reducing infrastructure and operational complexity.

DELIVERY MODELS

- Enterprise Software License
- Managed Hosted Platform
- Private Cloud Deployment
- Hybrid Deployment

Why banks choose OrbisMoneta

REASONS

- Built on nearly three decades of enterprise payments expertise
- Designed specifically for commercial bank Retail CBDC adoption
- Faster time-to-market with reduced implementation risk
- Flexible deployment — Licensed or Hosted Platform
- Enterprise-grade security and scalable architecture
- Future-ready platform for evolving digital money ecosystems

Section introduction

LABEL ABOVE THE HEADING

Industries

HEADLINE

Built for every institution shaping the future of money.

INTRODUCTION

We work across the full spectrum of the financial ecosystem — from global banks to digital-native fintechs and financial market infrastructure operators.

Industry segments

Five cards, each with an icon, a title, a description and capability tags.

Banks & Financial Institutions

Retail, commercial, corporate and investment banks modernizing payment infrastructure, launching digital money capabilities and deploying AI-powered risk management.

TAGS SHOWN ON THE CARD

Enterprise Payments · ISO 20022 · Digital Money · Fraud AI · API Banking

Fintechs & Digital Banks

Agile financial services companies needing specialist infrastructure — payments access, regulated digital asset capabilities, scalable risk architecture and cloud-native platform engineering.

TAGS SHOWN ON THE CARD

Product Strategy · Cloud Native · API Banking · Risk & Compliance

Corporates & Treasuries

Multi-national corporates and treasury teams seeking to optimize cross-border payments, integrate with open finance ecosystems and leverage programmable money for supply chain and trade finance.

TAGS SHOWN ON THE CARD

Cross-Border · Treasury Payments · Open Finance · Tokenization

Governments & Regulators

Government agencies and supervisory authorities building national payment systems, CBDC policy frameworks and regulatory oversight capabilities for the digital financial system.

TAGS SHOWN ON THE CARD

CBDC Policy · National Payment Systems · Regulatory Sandbox · FMI

Financial Market Infrastructure

Payment system operators, clearing houses, CSDs and exchanges modernizing clearing and settlement infrastructure, adopting ISO 20022 and connecting to digital asset and CBDC ecosystems.

TAGS SHOWN ON THE CARD

Clearing & Settlement · ISO 20022 · Digital Assets · Interoperability

WE NEED THIS FROM YOU

Engagement Model

HEADLINE

How we work with you.

INTRODUCTION

A structured four-phase engagement model — bringing strategy, architecture, engineering and operational expertise to bear as a single, accountable team.

Discover & Define

We assess your current state, technology estate, regulatory context and strategic objectives — and define a clear, honest picture of what modernization will deliver and require.

Design & Architect

We produce a target architecture, product specification and transformation roadmap — grounded in what works at financial infrastructure scale and shaped for your specific regulatory environment.

Build & Deliver

Engineering and product pods move from approved design to production — shipping software, integrating systems and embedding the controls and governance your institution demands.

Operate & Evolve

Ongoing platform operation, performance optimization and strategic support — because financial infrastructure is never truly complete, and neither is our commitment to your outcomes.

OrbisMoneta Lab

The innovation lab — currently a placeholder section awaiting content and imagery.

LABEL ABOVE THE HEADING

OrbisMoneta Lab

HEADLINE

Where we prototype the next generation of financial infrastructure.

BODY COPY

Our innovation lab explores emerging technology — from AI-native payment rails to tokenized settlement — before it reaches production. Details coming soon.

WE NEED THIS FROM YOU

Client instruction from the brief: "Sir will share more images. For now we can place placeholder." — imagery and full copy for this section are outstanding. Please supply: 3–5 prototype or research themes (title + 2 lines each), and the supporting images.

Ecosystem & Partners

The three-tier partner framework and the partnership call to action.

Section introduction

LABEL ABOVE THE HEADING

Ecosystem & Partners

HEADLINE

Built with the best of the financial technology stack.

INTRODUCTION

No institution modernizes in isolation. We integrate, certify and co-engineer alongside the cloud providers, fintech platforms, core banking vendors and specialist technology partners our clients already depend on.

Partner tiers

Technology Partners

Cloud platforms, core banking vendors and infrastructure providers whose stacks we work with regularly — enabling faster integration, reduced technical risk and pre-validated reference architectures.

Implementation Partners

Systems integrators, boutique consultancies and specialist engineering firms accredited to deploy and extend OrbisMoneta platforms — extending our delivery capacity across geographies and verticals.

Strategic Alliances

Payment networks, standards bodies, regulatory sandboxes and industry consortia we co-innovate with — helping shape the interoperability standards and policy frameworks that next-generation financial infrastructure will require.

WE NEED THIS FROM YOU

No partner logos are currently placed. If named partners are to be shown, please supply the approved logo set and confirm we hold permission to display each mark.

BRAND STATEMENT

Building secure, intelligent, and interoperable financial platforms for the next generation of global finance.

CORE CAPABILITIES

- Enterprise Payment Platforms
- Cross-Border Infrastructure
- CBDC & Digital Currency
- Tokenization
- Digital Assets
- AI for Financial Services
- Payment Modernization
- Financial Crime & Risk
- ISO 20022 Transformation

LEADERSHIP SUMMARY

Founded and led by a payments and financial technology executive with nearly three decades of experience delivering mission-critical payment infrastructure, enterprise products, and modernization programs across global financial institutions, technology companies, and regulated banks.

The story

Four narrative blocks.

WHY ORBISMONETA EXISTS

The financial industry is entering the most significant transformation since the introduction of electronic payments. Digital currencies, tokenized assets, artificial intelligence, real-time payments, programmable finance, and cloud-native infrastructure are fundamentally reshaping how value moves across the global economy. Yet many institutions remain constrained by legacy technology, fragmented architectures, and increasingly complex regulatory obligations. OrbisMoneta was established to bridge this gap — combining strategic advisory, enterprise software, and engineering expertise to help financial institutions modernize with confidence while preparing for the future of money.

WHAT WE DO

We advise, design, build, and operate enterprise-grade financial technology platforms that enable institutions to modernize payment infrastructure, adopt digital assets, integrate AI into financial operations, and accelerate innovation without compromising resilience, security, or regulatory compliance. Our capabilities span strategy, architecture, software engineering, cloud platforms, systems integration, managed services, and proprietary products — providing clients with a single trusted partner throughout their transformation journey.

WHY INSTITUTIONS CHOOSE ORBISMONETA

Our approach is built upon practical experience rather than theoretical consulting. Unlike traditional advisory firms or pure software vendors, OrbisMoneta combines strategic thinking with product engineering and implementation expertise. Clients choose us because we understand how financial infrastructure operates inside banks, payment networks, fintechs, and regulated institutions — and because we have successfully delivered mission-critical payment systems at enterprise scale.

OUR VISION

To become one of the world's most trusted financial infrastructure companies, powering the next generation of payments, digital assets, and intelligent financial ecosystems.

Innovation Philosophy

Presented as a pull-quote.

QUOTE

True innovation is not about adopting the latest technology—it is about solving tomorrow's financial challenges before they become today's business problems. Every product we build begins with understanding how financial markets are evolving, where institutions are heading, and what capabilities they will need to succeed in the future.

Client instruction from the brief: "Contact us page to be inspired by FIS but a little different. The left-side content from the CTA form to be added to a drop-down." — this restructure has not yet been applied. As briefed, the five contact routes on the left would collapse into a single dropdown selector within the form.

WE NEED THIS FROM YOU

Client instruction from the brief: "Floating CTA of contact should route to form where the user needs to fill all the information. WhatsApp to be removed." — Confirmed: there is no WhatsApp button in the current build. There is also no floating contact button yet; if one is wanted it should scroll directly to this form.

WE NEED THIS FROM YOU

Form submissions currently have no destination. Please confirm the inbox that should receive enquiries and whether a CRM or auto-responder is required.

What we still need from you

These are the pieces we cannot write or design on your behalf. Everything else is ready to build once you have approved the copy.

Needed before we can finish the site

- **GLOBAL** Service naming is inconsistent between the Services dropdown menu and the Services page cards. Confirm one master list of service names.
- **GLOBAL** "Contact" appears twice in the header (button + Career link both route to Contact). Confirm final navigation; the brief asks for a single Contact entry.
- **GLOBAL** Privacy Policy, Terms of Use and Disclaimer pages are not written. Supply approved legal copy.
- **PAGE 5** OrbisMoneta Lab is a placeholder — no imagery, no detail. Supply images plus 3–5 prototype/research themes with short descriptions.
- **PAGE 7** Co-founder and additional leadership profiles outstanding. Supply name, role, photograph and ≈ 90-word biography for each.
- **PAGE 7** Leadership photographs missing — cards show initials. Supply professional headshots.
- **PAGE 7** Careers page to be added under About (per brief). Supply employer positioning, cultural principles, open roles and application route.
- **PAGE 8** Nine article headlines exist but no article pages, body copy or images. Supply full copy, lead image, author and date per article — or confirm a phased publishing plan.
- **PAGE 9** Contact restructure per the FIS-inspired brief (left-side routes into a dropdown) not yet applied. Confirm the intended layout before build.
- **PAGE 9** Enquiry form has no submission destination. Confirm receiving inbox, CRM and auto-responder requirements.

Smaller decisions when you have a moment

- **GLOBAL** LinkedIn and X/Twitter links are placeholders. Supply live profile URLs.
- **PAGE 4** Industry cards use emoji icons rather than brand icons. Approve a custom icon set.
- **PAGE 6** No partner logos placed; "Become a OrbisMoneta partner" needs a grammar fix. Supply approved logos and permissions; approve "Become an OrbisMoneta partner."
- **PAGE 8** "Stablecoin Regulation in 2025" will read as dated. Approve a re-titled version.

Already settled from your brief:

- Platform diagram to remain a static image (per brief).
- WhatsApp button — confirmed absent from the build.

Happy with it?
